^{*} The Iranian fiscal year ends on March 20th

^{*} According to the Central Bank of Iran, the rate of exchange was \$1 / Rls 9,717 at the end of the reported period

Foreword

The fact that current global recession, which obviously stemmed from the mismanagement of the United States financial market and has profoundly affected governments both in developed and developing economies and businesses all over the world, is indisputable. One of the most essential impacts of the recession is that it has forced some of the Western economies and financial institutions to have to struggle for their very continued existence and some of the oldest and largest financial institutions have been driven into bankruptcy and many others have had to be bailed out by their governments.

However, this has not been the case as far as Bank Melli Iran (B.M.I.) is concerned. Indeed, unlike a number of large banks in Western countries, B.M.I. not only has not been required government bailout, but also lent a helping hand to the Iranian government and private sector thereby making positive contributions in the direction of the development of Iran's economy.

B.M.I. made net profits of 1,919,688 million Rials, while total assets increased from 546,662,511 million Rials to 565,701,285 million Rials during the reported period. Against the global context, B.M.I.'s performance is remarkable. Thus, B.M.I. enjoyed profitability at a time when other, larger banks in other parts of the world were facing liquidation and in spite of unjust sanctions imposed against the country. Furthermore, despite the ever growing number of private banks within the Iranian market, B.M.I. continues to hold the largest market share fundamentally due to the general public trust and has been able to maintain its position as the number one bank of Iran and as one of the largest banks in the Islamic world and the Middle East region.

Building upon its achievements, B.M.I. intends to continue moving forward from strength to strength, and to further expand within the increasingly competitive market.

To conclude, B.M.I. would like to take this opportunity to express its gratitude and appreciation to its hard working staff without whose commitments, dedication and reliable professionalism and diligence, it would not have achieved so much.

Organization & Methods Department

Our History

Prior to the establishment of Bank Melli Iran (B.M.I.) in 1928, the Iranian state was ruled by the Ghajar Dynasty which was heavily reliant on foreign financial and banking services. As a consequence, the people of Iran had been longing for a national bank that would emancipate the nation from forty years of alien dominance on Iran's financial and banking industry. The foundation of Bank Melli Iran restored the long hope of the nation and strengthened the financial and economic power of the Iranian Government in a position to suspend the licenses and operations of all foreign banks in Iran. Hence, the establishment of BMI put an end to foreign hegemony on Iran's banking industry.

Thus, the establishment of B.M.I. was far more significant than the birth of just a bank, as it helped reinstate national pride as far as positive economic independent of a country is concerned. Furthermore B.M.I. brought with it economic and political impact. Indeed, the name of BMI signifies the national importance of this bank.

When translated into English, the name Bank Melli Iran means "The National Bank of Iran".

As a financial intermediary, BMI quickly began to mobilize financial resources which were fueled by the savings of its clients, toward agriculture, industry and commercial activities. Hence, this bank made immediate and significant contributions towards the strengthening and development of Iran's economy.

Until 1950, when the Central Bank of Iran (C.B.I.) was established, B.M.I. had been granted the sole power to issue bank notes by the Parliament (Majlis) in 1932. Hence, in addition to carrying out commercial activities, Bank Melli Iran simultaneously incorporated the duties of the Central Bank, which included government banking operations; regulating the mintage, currency circulation and maintain the value of local currency, credit regulations supervision over the balance of payment as well as supervision over the country's overall banking system.

When C.B.I. was finally established in 1950, B.M.I. offered the newly established Central Bank, its expert know-how and experienced workforce and thereby, continued to make major assistance toward the development of Iran's banking system.

Having handed over the duties of the central banking to C.B.I., Bank Melli Iran was able to focus on commercial activities. Today, with over 80 years of experience, B.M.I. continues to be the most trusted banking and financial institution both in local and international arena.

Mission, Vision & Objectives

Our Mission

Our mission is to continue to be the pioneer of innovation in Iran banking industry by rendering high quality of financial services, and to create added value through innovative means for customers, the government and the society at large.

Our Vision

Our vision is to:

- Achieve worldwide recognition and continue offer outstanding service to our customers,
- Become the leading provider of innovative banking both in products and services based on Islamic banking principles and global best practices,
- Enhancement of truly international provider of a full range of financial services to our customers both within and without our boundaries,
- And finally to deliver superior value to our depositors and upgrade our reputation for excellence with our employees, regulators and shareholders.

Our Objectives

As the largest and most credible financial and monetary institution of Iran, BMI strives to define and meet its strategic targets in a way that assures its success in the increasingly competitive environment of Iran's banking sectors.

Our main objectives include:

- Expand the range and quality of the bank's services to meet the growing needs of the public and private sector's increasing demands and expectations
- Utilize the latest information technology for enhancement of services
- Grow profitability through managing costs
- Plan for retaining market leadership based on accurate market research and analysis
- Expand the Bank's international network
- Encourage creativity and innovation throughout the organization.

Iran's Banking System

The pre-revolutionary banking system in Iran was dominated by western patterns. By 1979, there were 36 banks operating in Iran including many internationally joint-ventures banks. Following the Islamic Revolution (1979), as a result of the transfer of deposits abroad, and problems in collecting outstanding debt, most of the private banks were left in a precarious position. Hence to prevent a complete collapse of the banking industry, nationalization of all banks was announced.

Consequently the need for an effective administration of the newly nationalized banks and thereby achieving uniformity in rendering newly adopted Islamic banking services, granting credit facilities and adopting a unified policy in other key economic, financial and monetary areas, necessitated the

grouping of the newly nationalized banks into two main categories. Therefore, in early 1980 the 36 banks were merged into 9 banks comprising of 6 commercial and 3 specialized banks.

Concurrent with nationalization, studies were also being made on Islamization of the banking system, which culminated in the Law on Usury-Free Banking ratified by the Parliament in 1983.

Today Iran's banking system is still dominated by 11 state-owned institutions, including seven commercial banks and four specialized banks, which jointly hold approximately 85% of the Iranian banking sector. In addition, there exist six private banks, two private credit institutions, a growing number of credit co-operatives and three Free Zones based branches of foreign banks.

Presently, a major initiative is underway for privatization and modernization of the Iranian banking industry. In line with new macroeconomic policies of the government, banks are gradually reducing interest rates, introducing new banking services and expanding their international network.

Government debt to the banking sector is low, estimated at about 3% of GDP and 30% of budget revenues in 2007 and is mostly domestic. All domestic debts are denominated in local currency.

The growth of credit granted to the private sector is expected to remain strong, as it has been for several years, rising from 35% of GDP in 2001 to an estimated 51% of GDP in 2005. The inflow of oil revenues inevitably adds liquidity to the financial system. Certain banking reforms permitting an increase in financing are also responsible for higher rates of consumption and private investments.

Lending and deposit rates of state-owned banks are still set annually by the Monetary and Credit Council, but the share of new credit that state-owned banks are allowed to allocate themselves increasing, and currently stands at 45% with different ceilings for specific sectors in line with the adjectives set out in the prevailing five year development plan.

Islamic Banking

Having commenced its activities some three decades ago, the Islamic Banking system has enjoyed favorable growth and attracted the attention of many investors and bankers around the world.

Instead of paying "a fixed interest", which is forbidden in Islamic law, Islamic banking shares its profit and loss with customers. In this system, although the banks offer their clients on account interest, this is rate may vary depending on the bank's performance by the end of the fiscal year. Based on this system, a bank has a close link with its clients and they make joint projects to sell to a third party. What is focused in Islamic banking is the objective of Fixed Usury Free Banking for establishing social justice, which tends to be the first objective of Islamic economic system. In fact, in usury-free banking system, the focus is the applicant's purpose. For each contract, a special technique is devised, in a way that firstly, the clients and the bank are not forced to pay or receive interest and secondly the profitability levels of the contract are also considered. In the Islamic banking system, the banking transactions have, therefore, been presented in the form of contracts. The current Islamic contracts in Usury Free Banking are:

Mozarebeh

Mozarebeh is a defined contract in the civil law under which the necessary facilities are granted to business people. In Mozarebeh, one of the parties (owner) provides the funds, stipulating that the other party (agent) uses it for trading and both parties share the related profit.

Je'aleh

Je'aleh is a contract based on which the customer is obliged to pay a certain sum plus a defined commission in return for a certain action, according to the contract. The acting party is called "agent" or "contracting party". This contract is applied in the fields of mine and industry, agriculture, housing, commerce and public services. When the bank acts as an agent, it accepts to carry out a particular work under a mutual contract with the applicant. Regarding the special conditions of the undertaking, the bank, then, embarks on assigning the executive operation of the accepted task, wholly or partly, to another party under a second contract in order to fulfill its obligation.

Legal Partnership

Legal Partnership is a contract under which the bank provides part of the capital of new joint-stock companies or buys part of their stocks, hence sharing in the profit of these companies.

Civil Partnership

Civil Partnership is a contract under which facilities for the development of productive, commercial and service activities are provided. This contract is the combination of legal or natural persons' shares in cash or kind and in common for profit making as per the contract. Regarding their applicability, the applicants can take advantage of these facilities.

To conduct this transaction, purpose of transaction, necessary capital for partnership, collaterals, the goods price, approximate expenses, total price, selling price and selling method, and profit sharing ratio of bank to applicant should be indicated.

Installment Sale

A contract under which the bank delivers goods to the customer at a set price, a part or whole of which would be received on predetermined maturity through equal or unequal installments.

Ghardh Al Hassaneh

Under this contract, the bank as a lender pays a specific amount to legal or natural persons as the borrower as per specified regulations. The borrower's repayment obligation is equal to the received amount plus its commission.

The portion of each bank to grant Ghardh Al Hassane, the maximum payable amount (facilities) to each applicant, and the commissions are annually specified by Central Bank of Iran.

Mozare'eh

Under Mozare'eh contract, the Bank gives a farmland to the customer for a specified duration. The customer works on the land and related profits are shared.

Lease to Own

Under this contract, it is agreed that the lessee, if complying with the terms of the contract, will obtain the ownership of the leased upon completion of the contract.

Salaf

Salaf is forward purchasing of produced goods for specific amount. According to Usury Free Law and to partly provide the working capital of production units, banks purchase the goods produced by the customer as per their request whether the owner is natural or legal.

Banks are allowed to purchase the goods, which are produced solely by the units, cannot be easily spoiled and can be quickly traded.

Discounting

According to the discounting contract, banks discount the documents and drafts of production, trade and service units.

Mosaghat

Mosaghat is a contract between a garden owner and another party who receives some of the product in return for maintaining and harvesting the garden.

Our Branches

With over 3,300 domestic branches offering a wide range of financial services to the Iranian public, Bank Melli Iran is one of the largest Iranian banks in terms of the number of branches.

In terms of performance, the number of profit making branches has during the reported period outweighed the loss making branches by far. The profit making branches in Tehran during 2008/09 numbered 548, while the number of money losing branches in Tehran was only 13. Hence, the profit making branches have significantly outperformed the money losing branches.

Combating Money Laundering

AML/CFT Measures

Executing the Anti-Money Laundering & Combating Terrorism Financing (AML/CTF) regulations prevents unexpected transfer of massive funds obtained from illegal transactions in and out of our country and hinders economic imbalance.

Imposing the essential controls acceptable to the international accredited institutes (such as FATF, IMF, UN, ...) facilitates the international trade and correspondence relations with foreign banks and will result in attracting foreign investments, improving the production trend and employment level and finally attracting the public satisfaction along with the increase in credit, power and safety of our country's economy.

Another important point which has strongly been emphasized by FATF is the staff training not just once but periodically while updating all of the network staff concerning money laundering and other financial crimes and the ways of fighting them.

According to the investigations made by the international accredited organizations including Wolfsburg Group and FATF, the most effective and drastic method for fighting money laundering in the banks is utilizing "a systematic risk based approach " and controlling the reports prepared by the said system. Risk based approach not only controls exchanged amounts at a banking system but keeps all banking activities in check by scrutinizing risky bottlenecks including repeated banking operations in an account or rate of funds withdrawal and remittance and other predicted factors.

In this context, at BMI we have taken a number of measures to combat money laundering, which include:

- Fully identifying its customers from the very beginning of offering banking services, that is, from
 when the customers open their bank accounts and when offering them other banking services
 such as receiving cash, purchasing or selling hard currency as well as opening letters of credit,
- Establishing an integrated information bank with regard to our customers,
- Receiving information from related authorities with regard to suspicious customers.

Electronic Banking

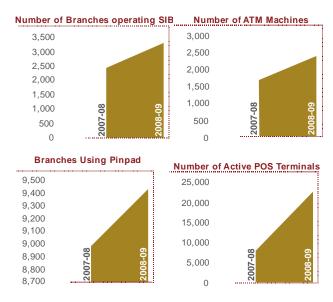

Electronic banking (e-banking) offers a number of advantages for both customers as well as banks. As for the customer, e-banking eliminates the need to physically approach the bank for acquiring some banking services such as account information or transfer of funds. Not only does this save time for the customer, it also enables the customer to take advantage of banking services 24 hours/day, 7days/week.

E-banking offers numerous opportunities for banks too. Thus, it helps the banks to operate more efficiently, or maintain their customers despite change of location, develop the geographical scope of banking operation, to locate new clients in targeted markets, as well as boosting their reputation as far as offering banking services is concerned.

Bank Melli Iran offers numerous e-banking services including:

- SABA Internet Banking, which enables the user to:
- manage one's current and savings accounts,
- receive transaction details via email and SMS,
- transfer funds.
- receive information regarding the latest stock and exchange rates,
- use bank cards, which include foreign currency credit and debit cards,
- take advantage of telephone banking, which enables the user to receive information regarding one's account, such as balance, recent transactions, rates of exchange etc.,
- and to use SAHAB Inter-bank Money Orders.

Today, BMI continues to invest in IT in order to offer better, quicker e-banking services to its clients, whilst ensuring that information security is well guarded. The graphs below demonstrate the Bank's performance in equipping its branches with necessary e- banking hardware since 2007-08.

The number of BMI branches operating SIBA has grown by over 35%, the number of ATM machines has risen by almost 53%, the active POS terminals by over 190% and the number of branches using PINPAD has grown by a phenomenal 281%. These figures demonstrate BMI's outstanding performance in adopting modern banking.

International Banking

The scope of our activities extends well beyond Iran's boarders. Our international activities are undertaken in accordance with the regulations set forth by the Central Bank of the Islamic Republic of Iran (CBI); with the obligations of the Budget Law of both commercial and non-commercial sectors within and outside the Country; and a wide network of international correspondents, all applying the monetary and Forex policies of the CBI.

In addition to having subsidiaries in the UK, Bahrain, Russia and Afghanistan, we also have some 12 branches in France, Germany, UAE (7 branches), Iraq, Oman as well as Azerbaijan. The first foreign branch of BMI was established in Hamburg, Germany in 1965/66.

Although sanctions were enforced against BMI's branches during the reported period, nevertheless, the profits from our international branches increased by 44% during the reported period, in comparison with the previous year, suggesting the ineffectiveness of the mentioned sanctions. In addition, despite the sanctions, we have been successful in continuing our international activities, offering various services to our clients including opening of letters of credit to Forex services. The tables below demonstrate the performance of BMI during the reported period:

Opened Letters of Credit

Transacted Notes	Balance	Amount of Credits	Amount of Contract	No. of Credits
228,482,148.56	1,351,310,202.06	2,213,482,602.38	3,000,000,000	1723

Casil Deposit of Guarantees	Balance	47,596

Human Resources

Bank Melli Iran employs over 43,000 personnel, who work within the 3,300 branches of BMI or within the executive sphere of the Bank.

Having long recognized the fact that human resources are the most important asset of organizations, Bank Melli Iran has during its 80 years of activity, been very particular about recruiting the right staff.

The educational levels of BMI's staff are as follows:

Training

Considering training as an essential part of the human resources development, B.M.I. has invested a great deal of time and resources in the training its staff in order to maximize their productivity ratios. During the reported period alone, almost 3 million man/hours were devoted toward training, representing over 10% growth in comparison with the previous year.

The result of such dedication toward human resource development is reflected in the fact that B.M.I. is a major exporter of human resources to other banks, whereby during the 1950s, the newly established Central Bank of Iran enjoyed the expertise of B.M.I.'s experienced staff and today, other Iranian banks in the private sector keenly look to recruit and benefit from the ex-B.M.I. personnel. Consequently, a number of top directors in key positions within private banks are composed of retired B.M.I. managers, experts and directors which obviously demonstrate the confidence that other banks contain in the human resources of Bank Melli Iran.

What Separates Bank Melli Iran from Other Banks?

There are numerous factors that by far situate Bank Melli Iran aside from other ordinary banks. These include:

Political & Economic Significance

As mentioned earlier, B.M.I. was the first Iranian commercial bank that emancipated Iran's economy from foreign financial hegemony. Hence, the very establishment of B.M.I. carried with it political, economic and social significance for the country. It was even named Bank Melli Iran (the National Bank of Iran), symptomatic of the restoration of national pride and dignity as far as economic independence of Iranian government is concerned. No other bank in Iran has ever made such a positive and significant impact on the Iranian banking and financial representation both locally and internationally.

Historic Significance

With over 80 years of experience and as the oldest commercial bank in Iran, B.M.I. has a wealthy historical heritage few other banks enclose.

Fulfilling the Duties of a Central Bank

Before the birth of the Central Bank of Iran in 1950, in addition to operating as a commercial bank, B.M.I. also served the Iranian government and people as a central bank. Thus, B.M.I. issued and distributed bank notes and minted coins and gold and until very recently, gold coins bore the name of Bank Melli Iran. Even today, B.M.I. acts as a representative of the Central Bank of Iran (CBI) to perform cash handling services throughout the country. Furthermore, B.M.I. distributes.

Resources & Branches

With some 30% of Iran's liquidity held at B.M.I., this bank is the largest, most imperative bank in the country and one of the largest banks in the Islamic world as well as the Middle East Region. Most state related payments, such as payment of traffic offence tickets, tax payments, telephone, gas or electricity bill payments are carried out and processed by B.M.I. Hence, these factors help B.M.I. attract considerable resources which contribute to making this bank even more powerful from a monetary viewpoint. In terms of branches, with over 3,300 domestic branches and subsidiary companies abroad, BMI is also considered to be one of the largest banks in Iran and in the region.

Human Resources

As for mentioned earlier, BMI's dedication toward investing in its human resources and recruiting the right staff, has resulted in the creation of an extremely well trained, professional team. As a consequence, other banks are keen to take advantage of the knowhow and expertise of the B.M.I. staff. Hence, the experience and expertise of BMI's human resources also make Bank Melli Iran separate from other banks within the Country. government bonds. No other bank in Iran has ever had the capability of performing the sensitive and delicate duties of the C.B.I.

The Financial Ratios

During the period under report and due to heavy financial load born by Bank Melli Iran some of the financial ratios were not as satisfactory as it was expected .However as far as the overall performance under extensive financial conditions is concerned the ratios presented below is much better than it could have been in comparison with both local and international banks.

Return on Asset	0.11%
Facilities to Deposits	101.96%
Profit before Tax per Employee	0.01%
Total Expenses to Total Income	98.66%
Profit Before Tax to Total Income	1.34%
Customer's Total Current Account to Total Deposits	18.92%
Profit from Operation to Profit from Facilities	53.52%
Facilities to Asset	72.63%

Cash Balance at the End of the Year	5,297,705	(3,278,747)

1. Basis for Preparation of the Financial Statements

The Group and the Company's consolidated financial statements have been fundamentally prepared based on historical cost price and where necessary, current values are used.

2. Basis for Consolidation

- 2.1. Consolidated financial statements are the result of adding the figures of the financial statements of Bank Melli Iran and the Group companies which are liable to consolidation after elimination of the intergroup transactions and balances and unrealized profit and loss resulted from their transactions inbetween.
- 2.2. Regarding the subsidiary companies acquired within the period, the results of their operations are included in the consolidated profit and loss statement from the date their control has been effectively transferred to Bank Melli Iran. In case of the assigned subsidiary companies, the results of operations till the date of assignment are included in the consolidated profit and loss statement.

3. Summary of Most Important Accounting Procedures

3.1. In line with Usury-free Banking Operations Act and related executive bylaws and regarding the Central Bank of Iran decree No. 1799 dated 08/01/2003 and 126331 dated 10/03/2009, income from related activities to granted financial facilities, investment in stock and participation bonds considered as joint revenue with depositors and depositors' quota determined in relation with usage of their net resources in the mentioned activities.

3.2. Tangible Fixed Assets

- 3.2.1. Tangible fixed assets are entered into accounts based on the cost prices. Upgrading costs and costs of fundamental repairs which cause considerable increase in the capacity or remaining life span of the fixed assets or improve the quality of their output considerably are considered capital costs and are amortized in the remaining life span of the relevant assets. The maintenance and trivial repairs costs whose purpose is maintaining or revival of expected economic interests of the commercial unit (in proportion to evaluated standard function) are considered current costs and are entered into profit and loss account of the period.
- 3.2.2. In line with implementation of Article 62 of the Third Development Plan, land and buildings of the Bank at the end of 2004/05 have been revaluated and registered into accounts with the amount of RIs20,276 billion. The surplus earned from the mentioned revaluation which amounted to RIs16,700 billion considered in the "Government's Capital Increase in Bank" account according to the abovementioned Law.
- 3.2.3. Depreciation of fixed assets within the Country (except revaluated immovable assets) calculated based on rates and methods of depreciation table:

Asset	Depreciation Rate	Method of Depreciation
Building & Installations	7%	Declining
Motor Vehicles	25%	Declining
Furniture & Computer Systems Hardware	10 Years	Straight Line
Computer Hardware	3 Years	Straight Line

Depreciation of revaluated buildings will be calculated as from the date of revaluation year (2004/05) based on depreciation bylaw of Article 151 Direct Taxation Act with the rate of 3.5% with declining method.

3.3. Financing Costs

Except the costs that are directly ascribable to acquired "qualified assets", financing costs of subsidiary companies are considered as cost of the year.

3.4. Provision for Employees' Work Termination Benefit

Provision for employees' work termination benefit is calculated based on the last month's fixed salary and continuous benefits of one year multiplied by the years of service and are registered into accounts. In addition, provision of prior years to 2000/01 entered into accounts during 10 years.

3.5. Goodwill

The accounting of the combination of trade units are done based on purchasing method. Excess of cost price of acquiring investment in liable to consolidation subsidiary companies and the affiliated companies which are liable to net special value method in comparison to the share of the group in net book value of their recognizable liabilities and assets at the time of acquisition is recognized as goodwill and amortized within 10 years in direct line method. The goodwill resulted from acquiring affiliated

companies are reflected in the consolidated balance sheet as part of long-term investment book value in affiliated companies.
